

## Severn Bridge Cable Inspection Platforms

Following the success on the Forth Road Bridge ALPS were commissioned to supply all Lifting and Access equipment & specialist Industrial Roped Access Operatives to install and manage the 3 x ~12 ton cable access platforms required to carry out invasive inspection of the bridges main suspension cables.

Each platform was raised and lowered using four under-slung lifting pods, each pod equipped with a 3000Kg capacity traction hoist. Each hoist was in turn protected by an independent secondary safety device that reacted to any undesired over-speed situation.

Light duty suspended access platforms were also supplied and installed by ALPS, these used for access and egress to the main working platform above the carriageway.
